PIC 002: PC Virtualization

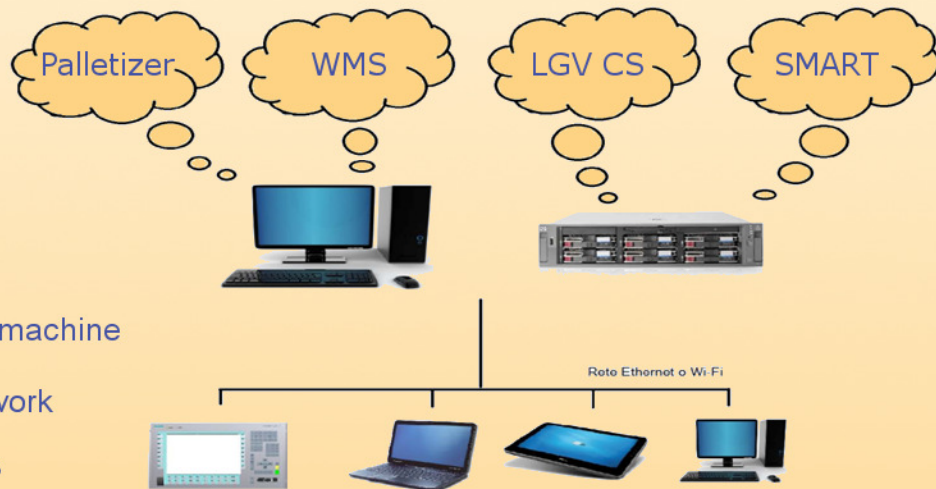

Save Money and Protect Your Investment – Virtualization is the Key

Description:

This is targeted at extending the life and portability of systems by virtualization. The term virtualization refers to the possibility of creating a PC with virtual user-defined hardware units consolidated on a physical server, essentially eliminating the need of a PC or piece of individual hardware.

Benefits:

- Software made portable
- Reduce downtime in case of PC failure
- Separate software from hardware
- Independence from a dedicated physical machine
- Recovery can be performed from the network
- We can virtualize PCs, PLCs and Servers

Customer Example:

Virtualized PCs:

- Principle WMS Server
- Backup WMS Server
- LGV Manager
- SMART & PC 7000
- PC Robot Island
