

# PRODUCT IMPROVEMENT COMMUNICATION

## PIC 005: LGV Safety & Performance

Product Improvement Communications (PIC): The PICs are instituted in order to communicate product improvements, new product developments and the various services E80 Inc. has to offer. It is our goal to be the world's premier provider of solutions that optimize the Value Chain of companies in the Consumer Products industry.

# PIC 005: LGV Safety and Performance Initiative

## *Safety First!*

### Description:

This Product Improvement Communication (PIC) is targeted at LGV safety and performance. Elettric80 understands that LGV System Safety, Performance and Training are critical to success and profitability. In a continuing effort to raise the bar on Performance and Safety awareness, Elettric80 is launching the Safety and Performance Initiative (SPI).

Elettric80 is available to provide system audits with specific feedback related to Safety, Performance and Training initiatives. Utilizing these initiatives, we can ensure each LGV system conforms to the current Safety standards, identify opportunities for improvement with best practice recommendations, supply a tailored training program to empower your workforce and provide customized solutions to help optimize various system processes and improve your system's reliability.

### Safety:

Industrial Safety standards are continuously being updated. To help our customers adjust to current standards and regulations, Elettric80 will supply customized solutions and programs to help increase awareness and reduce risks within the workplace.

### Performance:

In today's competitive environment, we find our customers are working continuously to improve operations and throughput and develop a highly trained workforce. Elettric80 will deliver recommendations and results in order to achieve maximum return on investment and optimize your Value Chain in the market place.

### System Audits:

As your End of Line Automation partner, Elettric80 will work directly with you to develop solutions for optimizing the system's processes and perform LGV system audits. This will allow our customers to stay current with Safety standards and assist in developing customized training and reliability programs to further enhance an individual or team's safety awareness, equipment knowledge, technical capability and the overall system's sustainability.

Elettric80 is offering an introductory audit at a discounted rate. An Elettric80 representative will contact you to set up the initial visit, which will require little supervision from your side. Visits normally take from one day to one week, depending on the size and complexity of the system. You may be asked to make some of your staff available to discuss the current status of your system's Safety, Performance and Training programs.

### Contact:

If you would like to schedule a visit, please email us at [E80Safety@elettric80.it](mailto:E80Safety@elettric80.it)  
For more details, please call us at +1 847.329.7717

Elettric 80 Spa is ISO 9001:2000 certified, and has extended this quality thinking into a sophisticated toolbox of business tools, giving our customers a detailed overview of the technology they have purchased and a guarantee of high quality after sales support.
