PIC 009: Elettric80 Migration to Windows 7 Service

Windows Support Ended April 8th, 2014

Don't delay the decision and let's change to the new standard!

Description:

This Product Improvement Communication (PIC) is targeted at a technical service to migrate the Elettric80 systems that are running in a Windows XP OS platform to a Windows 7 OS platform. Microsoft is ending their support for Windows XP. There are several areas in the Elettric80 equipment where PCs are used; some of the PCs can be migrated under a standard quote and some will require a customized quote. This opportunity can also be used to update other third party software that has newer versions so that the resulting system is fully up to date.

Benefits:

Improved Security:

Take advantage of the advanced security features from Windows 7 with:

- Improved UAC features
- Application controls which allow restricting rouge applications from running.

Sustainability:

Move your system to a platform that will be supported by Windows and have the ability to use future updates available.

Reliable and Well Performing OS:

- Improved reliability and troubleshooting with better memory management and an improved event viewer/resource monitor.
- Take advantage of new security and performance features, without losing hardware compatibility or long-term software support.

Improved Networking:

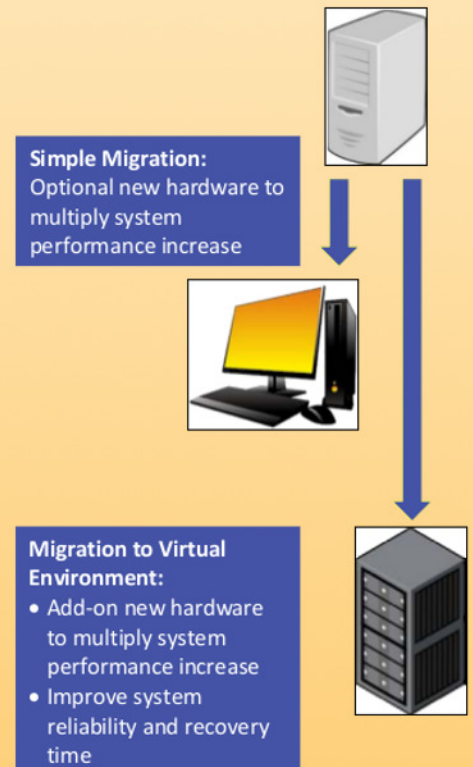

Faster transfer of small and large files.

Improved Troubleshooting Capabilities:

- Improved performance for remote desktop
- Resource monitor to track resource issues

Opportunity for Other Improvements:

- Improve the PC or server performance with some small hardware changes and/or using the 64 bit OS.
- Update other third party software and have a PC or server that is fully up to date.

Elettric 80 Spa is ISO 9001:2000 certified, and has extended this quality thinking into a sophisticated toolbox of business tools, giving our customers a detailed overview of the technology they have purchased and a guarantee of high quality after sales support.
